

New Brand!
New TEMPERED GLASS
IDOL 1991
by VOLTE-TEL.

SPECIAL FULL COVER TEMPERED GLASS

The new **SPECIAL FULL COVER TEMPERED GLASS SCREEN PROTECTOR** by **IDOL 1991** and **VOLTE-TEL** is one of the thinnest in the market with **only 0.25mm** thickness, therefore it does not add an extra volume to your smartphone and it does not change the texture of the screen. However it protects the screen from hard scratches and hits. The new **SPECIAL FULL COVER TEMPERED GLASS SCREEN PROTECTOR** is **100% transparent** and it **does not affect the contrast, brightness, colors and screen sensitivity** at all, so you are able to work on your smartphone such as it doesn't exist. It has **high hardness 9H** so it is difficult enough to scratch or even break, particularly in relation to simple screen protectors. It has **high-precision rounded edges 2.5D** for greater security and avoidance of injuries. Even if a possible blow breaks it, it smashes in to very small pieces without scattering such as the windshield of a car. So there is no risk of user injuries or screen scratches. Finally, due to the construction's material, **you get rid of the unsightly blisters**, which can be very easily created when using simple protectors, as it fits perfectly and very easily on the screen of your smartphone.

9H SUPER HARDNESS
0.25mm Thickness
2.5D CURVED DESIGN
