3D & 5D CURVED FULL COVER TEMPERED GLASS

New **3D & 5D CURVED FULL COVER TEMPERED GLASS SCREEN PROTECTOR** by **IDOL 1991** and **VOLTE-TEL** is one of the thinnest on the market with **just 0,30 mm** thick, so it does not add any burden to your smartphone and does not change the texture of the screen. However, it protects the screen even from hard scratches and hits. New **3D & 5D CURVED FULL COVER TEMPERED GLASS SCREEN PROTECTOR** is **100% transparent, covers the entire mobile screen and does not affect at all its contrast, brightness, colors or sensitivity** so you can work on your cell phone as if it did not exist. It has a **high degree of hardness of 9H** and is therefore very difficult to scratch or even break, especially in relation to simple screen protectors. It is made **with high precision 3D & 5D rounded edges** for greater safety and avoidance of injuries and if it breaks in case of a very strong hit, it gets very small pieces without scattering, just like the windshield of the car, so there is no risk of user injuries or screen scratches. Finally, due to the construction material, **you get rid of the unsightly blisters** that can be easily created by using the simple screen protectors, as it fits neatly and easily on your smartphone screen.

These particular Tempered Glass are available in two categories: Full Glue that have glue on their entire surface and Edge Glue that have glue around the perimeter.

When installing the FULL GLUE TEMPERED GLASS should give special ATTENTION and CAUTION as it is not possible to remove and reposition the tempered glass and it will probably need to be replaced with new.
