

ANTISHOCK TPU TRANSPARENT CASE BY VOLTE-TEL

The new **Antishock** cases from **Volte-Tel**, featuring innovative design, are perfect for those seeking a durable case that ensures the safety of their beloved smartphone. Made from **100% reinforced clear TPU material**, they combine protection for your smartphone without altering the "character" of your favorite device, fitting **perfectly** in the most discreet way. The **raised edges** around the case provide effective protection against various unforeseen dangers, such as a horizontal drop of your device to the ground. Additionally, with the Antishock protection system, extra TPU material has been added to the corners of the case. This material includes **internal air pockets** that act as airbags, absorbing shocks in the event of a potential drop. The case is also reinforced with an **anti-slip material** to prevent your phone from slipping out of your hands.

It is ideal for those who wish to combine protection with full functionality, thanks to the special design of the inner side, featuring small holes that allow the case to "breathe," eliminating unsightly "stains" on the back of your smartphone.

Protect your device with the new ultra-clear cases from **Volte-Tel**, which offer perfect fit and protection for your phone while ensuring unobstructed access to all its features.
