

## TEMPERED PLEXI GLASS 3D EDGE FULL COVER WITH **INSTALLATION TOOL**

The **TEMPERED PLEXI GLASS** by VOLTE-TEL is the top choice for those who want to protect their smartwatch screen. Unlike regular tempered glass, this product features **innovative 3D Edge technology**, offering full edge-to-edge coverage, even on curved screens.

The **Plexi Glass technology** provides both flexibility and durability against scratches, drops, and impacts, as it absorbs shocks better than standard tempered glass. Despite being **ultra-thin** at just **0.30mm**, it maintains the touchscreen's responsiveness and sensitivity without any

delay. Additionally, the **oleophobic coating** prevents fingerprints and oily residues, keeping the screen clean.

Unlike most tempered glass products on the market, this one includes a **special installation tool**, ensuring precise placement without bubbles. Even if you have no experience installing screen protectors, the tool makes the process **easy and quick in just 4 steps**:

Easy installation of the plexi glass  
with a bubble-free & perfect fit!

1. **Place** the installation tool on a flat surface.
2. **Insert** the smartwatch into the installation tool, clean the screen with the wet wipe, then with the dry wipe. Immediately after, use the **anti-dust sticker** to remove any remaining dust or particles.
3. **Peel off** the transparent film from the adhesive side of the plexi glass and align the **blue film** properly within the installation tool.
4. **Gently press** along the surface with the spatula to ensure proper adhesion. Finally, remove the blue film, and your smartwatch is now protected.
