

**20D FULL GLUE SEMI CURVED TEMPERED GLASS
 IDEAL FOR USE WITH CASES**

The new **20D FULL GLUE SEMI CURVED TEMPERED GLASS SCREEN PROTECTOR** by **IDOL 1991** and **VOLTE-TEL**, with a thickness of just **0.25mm**, adds no bulk to your smartphone and does not alter the texture of the screen. This specific tempered glass features adhesive across its entire surface, making it **Full Glue**, which ensures it is highly stable and less likely to detach. It protects the screen even from severe scratches and impacts.

The **20D FULL GLUE SEMI CURVED TEMPERED GLASS SCREEN PROTECTOR** is ideal for **curved-screen smartphones** and is also designed to be **fully compatible with cases featuring raised edges for added screen protection**. It does not affect the screen's contrast, brightness, colors, or sensitivity because it is **100% transparent**. With a **high hardness rating of 9H**, it is extremely resistant to scratches or even breaking, especially compared to regular screen protectors.

It is manufactured with **high-precision rounded 20D edges** for enhanced safety and to prevent injuries. In the event of a strong impact causing it to break, it shatters into tiny pieces that do not scatter, much like a car windshield, ensuring no risk of injury to the user or damage to the screen. Lastly, thanks to its material composition, you can **avoid unsightly bubbles** often created with standard screen protectors, as it fits perfectly and is very easy to apply to your smartphone's screen.
